Shreeraj Narwade

Product Designer / *UX Research, Interaction Design & AI Prototyping*

India | +91-8275178236 | shreerajn.work@gmail.com | Portfolio & Live Projects (Linktree) | LinkedIn

SUMMARY

Architect-trained product designer (B.Arch., 2026) who turns observed behavior into systems; designs and ships web prototypes with Figma, AI tools (Claude, Figma Make, Grok, Cursor, Google AI Studio), GitHub and Vercel.

EXPERIENCE

AcuAI Labs, Product Designer Intern — Remote | Oct 2026 to Present

- Redesigning the core app UI for a **B2B SaaS** platform automating **AI product feeds and ad creatives** for e-commerce brands.
- Smoothed in-app flows and user journeys to improve the overall user experience.

Anagram Architects, Architectural Intern — New Delhi, India | Nov 2024 to Apr 2025 | 5 Months

- Owned plans, sections, renders and client presentations for Prakriti School (Greater Noida) from concept through execution-set release, coordinating with structural and MEP consultants; repeated client changes and scattered approvals became the brief for Ledger.
- When the ARKS Studio (Mumbai) client felt 7 ft beams made the store feel low, iterated on mirror-clad beam fascias reflecting the Barrisol ceiling to add perceived height, which was implemented.

LocalxSociety, Architectural Intern — Paris, Barcelona, Madrid, Lisbon | Apr 2024 to May 2024 | 1 Month

- For a Government of Portugal / FabLab Lisbon market-site brief, led a two-person team: ran field research in 4 cities and precedent analysis, leading to the ABRIR / OPEN adaptive-reuse proposal.

PROJECTS

Found It, Privacy-First Subscription Tracker — Case Study + Live Prototype | Oct 2026 | 4 Weeks

- Ran interviews, a diary study and a **214-person survey** on losing track of subscriptions (**64% would not link a bank** to another app due to low trust); designed a tracker built on local CSV statement imports.
- Evaluated bank linking, email scanning and manual tracking; designed a recurring-charge detection workflow and spending overview, refined through usability testing rounds.

Otla Pages, A Hand-Drawn Digital Library — Design + Build, Live | Oct 2026

- Hand-drew, designed and coded a digital library for my writing, from first sketch to live site: **four rooms** (poetry shelf, story shelf, writing room, guestbook) with shareable links for every book and piece.
- Sketched every visual by hand and translated the drawings into code, with no stock or AI imagery; built a **custom reader** for my 4 poetry books with keyboard page turns, a plain-text edition and a skip link.
- Created the name (from the otla, the Maharashtrian doorstep seat), the brand and all interface copy.

Ledger, Decision and Approval App for Architects and Clients — Case Study + Live Prototype | Oct 2026 | 3 Weeks

- Saw approvals and client changes at Anagram scattered across email, WhatsApp and files, causing rework; designed **one shared record** for drawings, decisions, changes and explicit client sign-off.
- Defined the information architecture, project timeline and no-account client access; built with AI tools, GitHub and Vercel; live concept on sample data.

Plain Paper, Research Reader Design Concept — Case Study + Live Prototype | Oct 2026 | 4 Weeks

- Explored why dense abstracts and jargon keep non-specialists from understanding research; compared **six solution directions** and designed an AI reader concept with a structured summary, in-context jargon explanations and guided questions, preserving the original text and its limitations.

B.Arch. Thesis, Behavior-Driven Modular System — Thesis Drive | Aug 2025 to Apr 2026 | 8 Months

- Research phase: asked how street form (width, edges, plinths, walls, thresholds) shapes behavior; mapped density, duration, activity and demographics on 4 street types (**50+ hours at each site**).
- Synthesized observations through Gibson's affordances: a median becomes a labor hub, parked cars become evening seating, and what a space affords shifts with gender, age, class and time of day.
- Design phase: turned insights into **The Kit**, pre-cast concrete modules grouped by behavior (To Sit, Play, Read, Perform, Balance, Refresh), with specs and two manuals, much like a design system.

Other builds — 2022 to 2026

- Bench (comparison of six HCI programs); Delta 3D printer (hardware + Python, team of 2); Hiring Panel (Grok Bot resume critic); web experiments.

EDUCATION & CERTIFICATIONS

School of Environment & Architecture, Bachelor of Architecture — Mumbai | Dec 2021 to Apr 2026

- **CGPA 3.5/4** | 1st place, Esri StoryMaps contest, CEPT University (2022) | Class Representative, 2021 to 2022
- Google UX Design Certificate, Coursera (Dec 2025 to May 2026); UI/UX courses: Minoti Mehta (2026), Kaarwan (2023)

WRITING

4 poetry books (*The Universe Between Us; Window Seat, Facing Backward; Learning You, by Heart; Two Time Zones From Home*), on Otla Pages, plus essays on perception and decision-making (Substack).

SKILLS & TOOLS

UX & Research: User research (qualitative and quantitative), survey design, behavioral mapping, competitive analysis, personas, journey mapping, information architecture, user flows, wireframing, prototyping
Design: Figma, Framer, Photoshop, Illustrator, InDesign; AI prototyping, HTML/CSS, GitHub, Vercel
3D & Visualization: Rhino, Grasshopper, SketchUp, Blender, Enscape, Lumion, V-Ray, AutoCAD, Revit
Other: Python (basic), QGIS, Premiere Pro, DaVinci Resolve | Languages: English, Hindi, Marathi
